

when you wash poopy clothes, should you rinse the solid off before throwing into laundry with other clothes?

This is for informational purposes only. For medical advice or diagnosis, consult a professional.¹

Yes, absolutely. You should always **scrape**² or rinse off any solid or semi-solid waste before putting the clothing into your washing machine.

Throwing clothes with solid waste directly into the wash can create a few big issues:

Machine contamination:³ Solid waste won't just magically **dissolve**⁴; it can get trapped in the washer's drum, **agitation mechanisms**⁵, drain lines, or filter, contaminating future laundry loads.

Ineffective cleaning: The wash cycle will essentially **dilute**⁷ the waste into the wash water, **sloshing**⁸ it over every other item in the drum rather than actually cleaning them.

The Step-by-Step Clean Up

1. **Scrape**⁹ or flush solids: Dump or scrape any loose waste directly into the toilet.
2. **Pre-rinse with cold water:** Hose down or rinse the stained area in the sink or toilet using **cold water**. Hot water cooks the proteins in **biological**¹⁰ stains (like **feces**¹¹ or blood), baking them directly into the fabric fibers.
3. **Pre-treat or soak:** Apply a stain remover or an **enzymatic detergent**¹² (like Tide or Persil) directly to the spot. **Enzymatic**¹⁴ cleaners specifically break down **organic**¹⁵ proteins and fats.
4. **Wash separately or hot:**

For heavy **soiled**¹⁷ loads (like toddler **blowout**¹⁶ diapers or stomach bug accidents), it's best to run them in a separate load from your everyday clothes.

Wash on a **hot cycle** with a full dose of laundry **detergent**.¹⁸

Pro Tip: If you're dealing with cloth diapers or frequent toddler accidents, a **toilet sprayer attachment** (**bidet**¹⁹ sprayer) makes rinsing solids directly into the toilet fast and mess-free.

Need help getting rid of stubborn yellow poop stains or **lingering odors**?²⁰²¹

↪ Yes
